**Can you give any suggestion?**

It may be better to change somehow the toggle button to make the text of the block name more readable, because the font is too small.

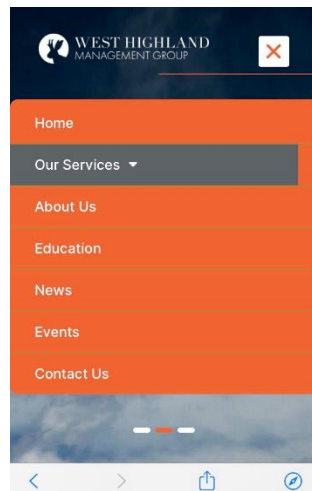

I didn't get this point.

Header.
Incorrect display of the sub menu when clicking.

Step to reproduce:
1. Open navigation on my device
2. Click on the arrow next to Our services
3. After the sub menu opens, you need to click on this arrow again
4. Move the coursor outside the navigation menu area

- Points given in previous design and reviewed opposite in this Design.

- Mostly CSS and Icon changes in various sections were done and after implementing the changes, the previous CSS seems to be in a conflict which I'm already trying to resolve.
  I have incorporated all the desktop and tab screen related changes suggested by Dasha and after that I see a bit of issues in News Section wrapper boxes.
- The content changes suggested by Meag were also not aligned to the design and I had to change several sections CSS and html multiple times which has also resulted in some weird behavior of sections.
- Talking about the Image optimization to have a better turnaround time of website, I have done it from my side. Will also work on some other gigs to have a better response time but there seems a bit of delay from hosting server as well which is dependent on Hosting server services.
- I have resolved the News Section styling issue now.

  it could be better if we re desig the section with content
  secondly we don't have mobile design as well
